

*Proposal for a collaboration  
to produce industrially:*

## **FRAMES FOR CONCEALED SLIDING DOORS**

# COMPANY PROFILE

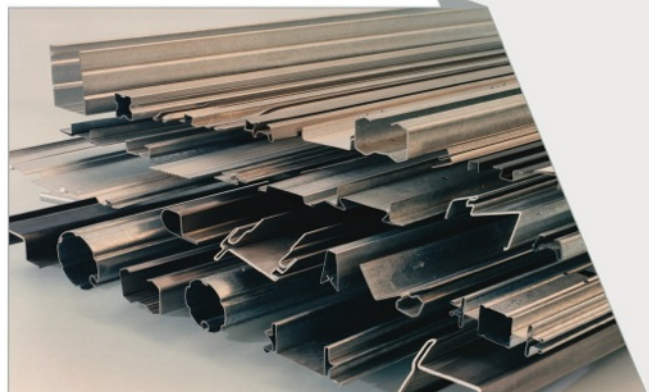

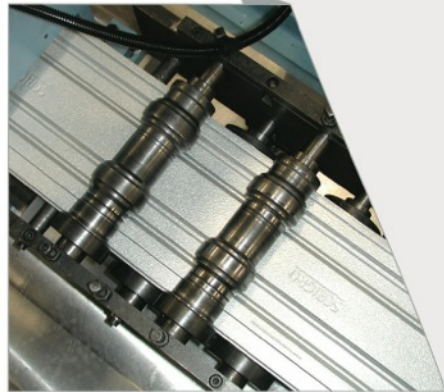

NIDO Srl was funded in Carpineti (Reggio Emilia) in early 2013 in the footsteps of that reality that Profil-Stamp s.r.l., founded in 1986, has created in the production of special profiles made from steel strips.

Thanks to the long standing experience matured in the field of profiling, the company has been developing and has increased its staff, production and administrative spaces and machinery, adapting itself to the path of technological development that the market demanded.

That's how it has successfully strengthened the relationship with national and international customers.

Over the years our specialty has been addressed on the components for the construction industry, in particular:

- Profiles for frames for concealed sliding doors
- Profiles for security doors
- Profiles for mobile walls
- Prefabricated components for bathroom walls

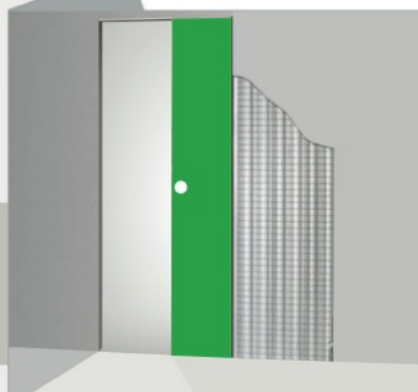

# THE PROJECT

The NIDO project allows to produce industrially a frame for concealed sliding doors in order to accommodate the doors in masonry or plasterboard walls. Thus, the doors can appear or disappear with a simple sliding movement rather than be opened and closed in the traditional swinging way.

The frame for sliding concealed doors was studied, designed and manufactured using the most modern and innovative technical solutions in order to obtain a high quality product and performance to help quickly and reliably the work of the mason and to ensure an excellent job to the carpenter.

# CONSTRUCTION DETAILS

The choice of materials, the most advanced technologies in sheet metal processing, the attention to construction details grant the product the following characteristics:

- ROBUSTNESS
- EASINESS OF ASSEMBLY AND INSTALLATION
- INSPECTION AND ADJUSTMENTS
- RESISTANCE AND DURABILITY

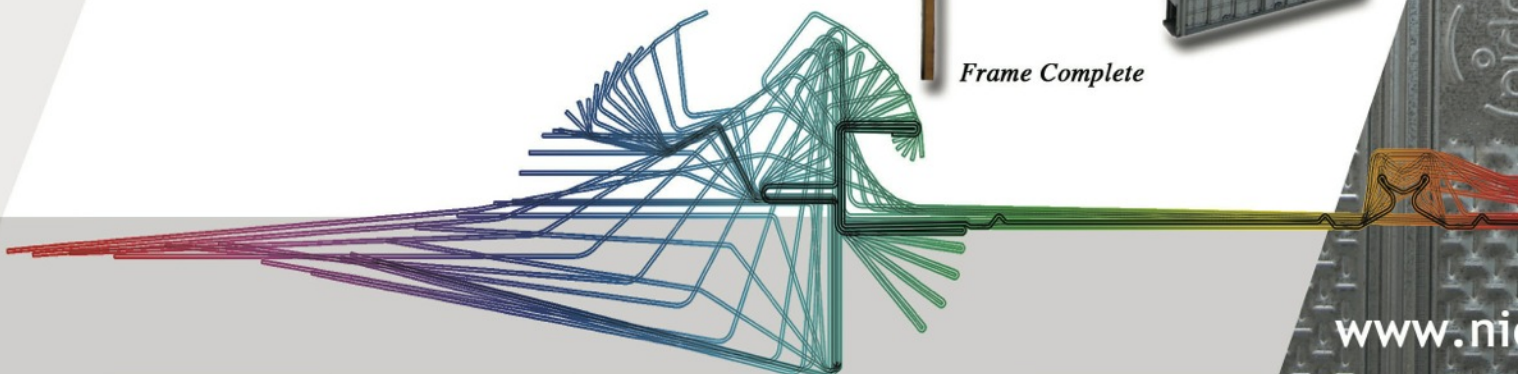

*Fastening Grid*

*Upper Part*

*Frame Complete*

# TECHNICAL DETAILS AND COMPONENTS

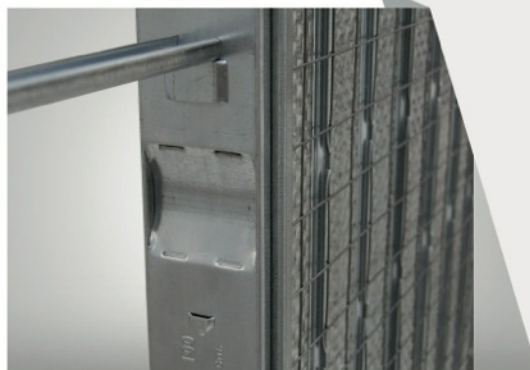

*NIDO is the perfect frame:*

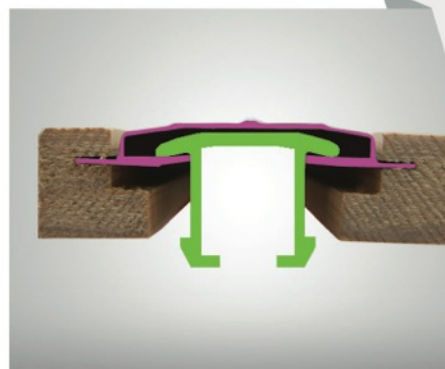

- MODULAR CONSTRUCTION SYSTEM
- ASHLARED MODULES
- INITIAL REINFORCED MODULES
- SECURING NETWORKS WITH DEFLECTION SYSTEM
- REMOVABLE SLIDE
- ADJUSTABLE DOOR LOCK
- STEEL-WOOD FALSE PILLAR AND FALSE BEAM

*Lower Base Excludable*

*Protection Profile*

*Removable Sliding Guide*

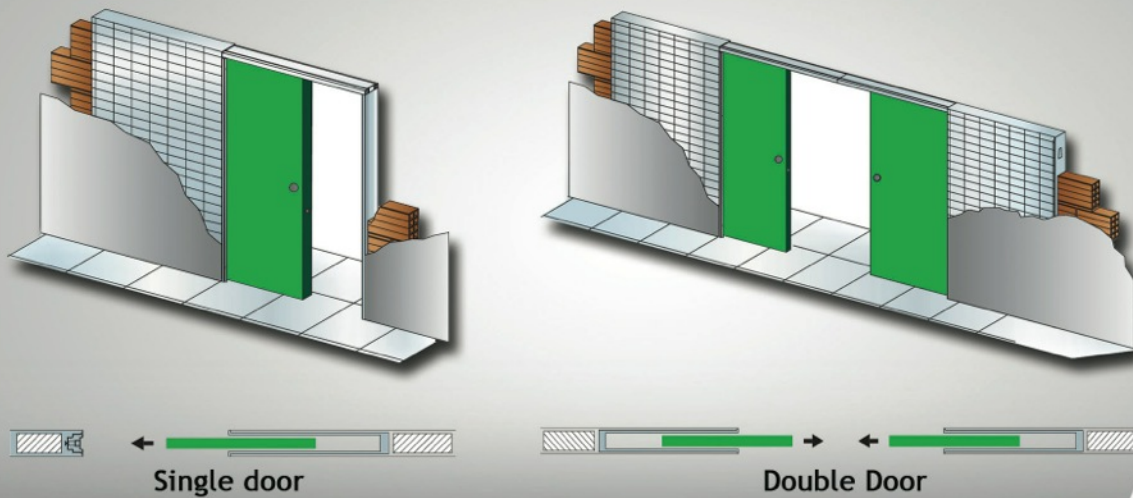

# VERSIONS AND MODELS

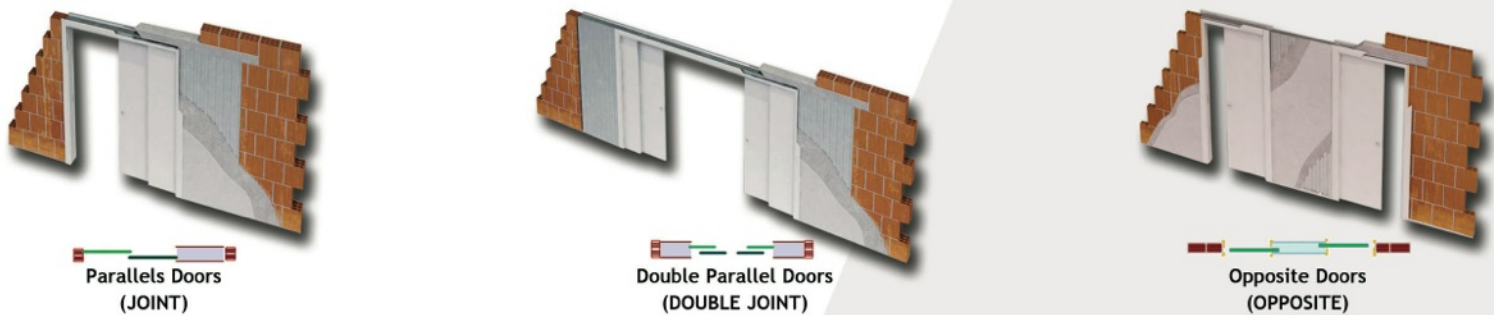

The Nido frame production involves the **PLASTER version**.

Substituting alongside the welded mesh with horizontal profiles suitably shaped, you get the **DRYWALL version**.

For these models the measures of the finished walls become 90/105/125 mm in the **PLASTER version** and 100/125 mm in the **PLASTERBOARD version**.

Using most of the available base components with others specially designed you can obtain the following models:

For these models the finished walls become 170 mm deep.

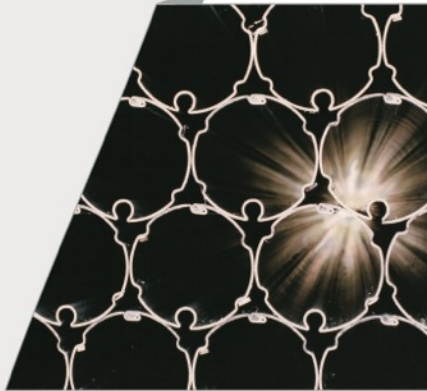

The nominal measurements, meaning the "passageway" in width and height are those normally required by the market and anyway, being a product made with modular system, they can be produced out of range, on request.

# SEARCH FOR COLLABORATION

As a manufacturer of special profiles for frames for sliding concealed doors, NIDO is specialized in the engineering of this specific product.

## *Nido owns:*

- a **Complete Project** for the realization of products in different versions and models for the high-end or economic market;
- **Systems, Machinery and High-Tech Equipment** ready to produce most of the profiles and accessories you need.

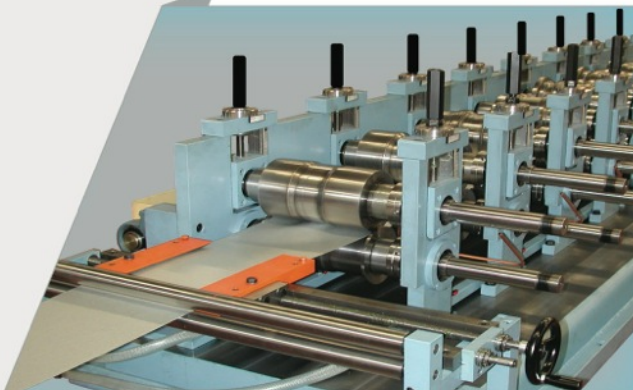

## *Nido is looking for:*

- an industrial cooperation for the completion of the frame, the improvement of the product range and the realization of the economical version.

## *Nido proposes:*

- as a provider of a large part of metal components (already created);
- as a collaborator in the study and design of new technical solutions.
